Indication: EPSOLAY® (benzoyl peroxide) Cream, 5% is indicated for the treatment of inflammatory lesions of rosacea in adults. Please see the full Important Safety Information on the last page and full Prescribing Information.
About rosacea

It’s more common than you think.⁴

You’re not alone—more than 16 million people in America are affected by rosacea. It is a chronic skin condition that can come and go, flare up unexpectedly, and even get worse over time. It can deeply affect self-esteem and mental health.²⁴⁻⁶

Common symptoms

Rosacea looks different on everyone, but here’s what to look out for⁶⁻⁸:

• Acne-like bumps and blemishes
• Tendency to blush or flush easily
• Persistent facial redness
• Small visible blood vessels
• A burning or stinging sensation on the face

Triggers

Many different factors can cause a rosacea flare-up. Identifying your triggers can help rosacea from worsening⁶⁻⁹:

• Alcohol
• Exercise
• Extreme temperatures
• Sun exposure
• Spicy foods
• Stress

Discover EPSOLAY cream

The first rosacea cream with microencapsulation technology¹²

EPSOLAY cream harnesses the power of benzoyl peroxide (BPO) to help relieve the bumps and blemishes of rosacea.¹³⁰

Looking for rosacea treatment with a delicate touch?!

Adverse Events: The most common adverse reactions (incidence ≥ 1%) in patients treated with EPSOLAY Cream were pain, erythema (redness), pruritus (itching) and edema (swelling), all at the application site.

Please see the full Important Safety Information on the last page and full Prescribing Information.
Why it works

Designed for sensitive rosacea skin

Microencapsulation technology \textit{gradually releases benzoyl peroxide (BPO)}

Here’s how:

BPO is an effective antibacterial ingredient that has been used in other products to effectively treat skin conditions like acne.

Until now, using BPO to treat rosacea might have caused skin irritation, but microencapsulation technology has helped change that. EPSOLAY cream was designed with high-tech microcapsules that control the release of BPO on your skin.

These microcapsules gradually release BPO onto your skin, so you can experience rosacea relief.

What you may expect

Clearer skin in as early as 2 weeks

Adverse Events: The most common adverse reactions (incidence $\geq 1\%$) in patients treated with EPSOLAY Cream were pain, erythema (redness), pruritus (itching) and edema (swelling), all at the application site.

Please see the full Important Safety Information on the last page and full Prescribing Information.

Rosacea relief you can see

EPSOLAY cream was studied in 2 clinical trials that analyzed the results of 733 people (18 or older) with moderate to severe papulopustular rosacea over 12 weeks.

Adverse Events: The most common adverse reactions (incidence $\geq 1\%$) in patients treated with EPSOLAY Cream were pain, erythema (redness), pruritus (itching) and edema (swelling), all at the application site.

Please see the full Important Safety Information on the last page and full Prescribing Information.
How to use

4 steps to skincare success

EPSOLAY cream is designed to be delicate on skin, so you can apply it every day as prescribed, either in the morning or evening.1

It’s as easy as C-A-M-P:

Cleanse
Use a mild cleanser like Cetaphil® Gentle Skin Cleanser, gently rinse your face, and pat completely dry with a soft towel.1

Apply
Lightly massage a pea-sized amount of EPSOLAY cream onto each area of your face (forehead, chin, nose, and cheeks). Avoid your eyes, lips, and mouth and let dry.

Remember to wash your hands, as the cream may stain or bleach fabric.1

Moisturize
After the medication has dried, use a moisturizer like Cetaphil® Moisturizing Lotion.1

Protect
If you decide to use EPSOLAY cream as part of your morning routine, be sure to use a daily sunscreen to protect your skin!1

How to save

You may be eligible to get savings on your EPSOLAY cream prescription*

Simply scan the QR code to access your Galderma CareConnect Patient Savings Card and start saving on the out-of-pocket expense of EPSOLAY cream.

*Galderma CareConnect is only available for commercially insured or uninsured patients. Patients who are enrolled in a government-run or government-sponsored healthcare plan with a pharmacy benefit are not eligible to use the Galderma CareConnect Patient Savings Card. Certain limitations may apply. Visit epsolay.com/savings for program details.

Adverse Events: The most common adverse reactions (incidence ≥ 1%) in patients treated with EPSOLAY Cream were pain, erythema (redness), pruritus (itching) and edema (swelling), all at the application site.
